LIFTING PRODUCTIVITY SINCE 1930

Donati Sollevamenti S.r.l. was founded in Italy in 1930 and has since then has earned a leading position on the international market for lifting and handling equipment, becoming increasingly successful and with exports accounting for two thirds of its total turnover. The advanced design and construction features of all Donati products, are the basis for the competitiveness and reliability of the entire range, which is suitable for all industries and tertiary distribution. Donati products have always been designed and manufactured in Italy. The company is known for its highly competitive marketing mix able to offer a vast range with solution both standard and special, an excellent quality/price ratio, quick pre and after sales answers as well as fast delivery; at Donati this is all part of our Clever Convenience value proposition.

Thanks to its marketing mix, Donati has always been the ideal partner for overhead travelling crane manufacturers, material handling integrators and distributors as well as service companies specialized in retrofitting/refurbishing.

Donati is known in the market for its constant focus on customer satisfaction, its in-house priorities are the quality of processes, occupational health and safety as well as environment protection. Donati is ISO 9001 - ISO 14001 - OHSAS 18001 and ISO 3834 certified. Donati also possesses the status of authorised "declaration of origin on invoice" status - Authorisation no. T/035/MI2/17. Donati has also adopted the provisions of Italian Legislative Decree 231/01 concerning the administrative responsibility.

CLEVER CONVENIENCE

Donati has always been known on the market for its ability to offers its customers top quality products with maximum reliability. Thanks to our expertise and know-how we can also supply a fast and precise pre- and after-sales service, completely simplifying the customer's experience. Guaranteeing a simple, pleasant and highly professional service is thus the added value that we offer our customers and translates into the concept of **CLEVER CONVENIENCE**.

CLEVER CONVENIENCE is our added value to customer service that includes the ability to easily and smartly manage requests for special solutions, the competitiveness of the offer always ensuring maximum product quality, expertise and professionalism of our pre- and after-sales service, ability to differentiate our image and brand on the market and the development of marketing materials and technological solutions for customers that make their work increasingly autonomous, fast and efficient.

This is our expertise that ensures your convenience.

OUR PRODUCTS

The Donati product range is able to meet every aspect of industrial lifting, always ensuring the maximum quality / price ratio combined with a pleasant and highly professional design.

Our product portfolio is composed of:

- ▶ **DMK electric chain hoists with capacities up to 4,000 kg**
- ▶ **DRH electric wire rope hoists with capacities up to 50,000 kg**
- ▶ **jib cranes with manual or electric rotation**
- ▶ **DSC light crane systems**
- ▶ **DGP wheel units and DGT gear motors**
- ▶ **bridge crane sets**

For specific application requests, Donati is able to offer, on request, specifically designed solutions for each product, as well as CSA homologation for DMK and DRH hoists.

Thanks to its flexibility, quick response and easy contact, Donati follows and supports its customers with utmost attention, building long-term partnerships.

ELECTRIC CHAIN HOISTS DMK SERIES

Robustness and reliability at your service at all times.

The DMK electric chain hoists with conical self-braking motors, have always been a synonym of quality and reliability. Made with one or two chains falls, they are available in normal or low headroom versions

The line covers a range of capacities from 125 to 4,000 kg and lifting speeds from 1.2 to 16 m/min. They can be equipped with hand-push and electric trolley with travel speeds from 7 to 22 m/min.

The hoists are equipped with a clutch device in the single chain fall version with maximum capacity of 2,000 kg. For higher capacities up to 4,000 kg there are two chain falls, the hoists are supplied completely with an electromechanical overload device and electric raise/lower limit switches.

The range is completely with versions up to 2,000 kg capacity also available in climbing version or with horizontal chain output.

MAX 4.000 KG

Quality and reliability at your service

ELECTRIC WIRE ROPE HOISTS DRH SERIES

Maximum power and safety to ensure uninterrupted work.

The range of DRH electric hoists is designed to always ensure maximum uninterrupted work thanks to its reliability. Composed of 4 basic sizes with capacities from 800 to 50,000 kg and lifting speeds from 0.7 to 12 m/min; lifting speeds from 0.4 to 14 m/min can be obtained with the application of frequency inverters. The complete range of single girder and double girder trolleys, the DRH series can be used for integrated applications on all types of lifting systems.

Modular and versatile.

The DRH series hoists and relative electric trolleys, are modular component products used to create multiple executions quickly, economically and safely, in standard versions and special ones including:

- ▶ True vertical lift
- ▶ Outputs opposite ropes from the drum
- ▶ Horizontal rope output
- ▶ Rope output towards the top
- ▶ Single girder trolleys in normal, low headroom and articulated version
- ▶ Double girder trolleys with hoist on top of trolley, suspended or perpendicular to the cranes' beams.

capacity up to 5,000 kg

MAX 10.000 KG

Perfect component integration
for safe and reliable applications

JIB CRANES MANUAL AND ELECTRIC

The most complete range for local handling of loads up to 10,000 kg

The result of in-depth knowledge of the most wide ranging applications, Donati jib cranes offer the most complete range of solutions for local handling of loads up to 10,000 kg.

Mass production performed with consolidated industrialised processes makes it possible to create completely reliable and technically innovative cranes with an excellent price/performance ratio.

The quality of the components used, and the excellent finishing of the metal structural work, as well as the EN ISO 9001 certified quality system allows us to offer a very quality product and always in line with the most modern international standards.

Donati's expertise in designing and manufacturing jib cranes and wire rope and chain hoists, ensures perfect component integration, as well as always satisfying both standardised and special installation requests.

LIGHT CRANE SYSTEM DSC SERIES

Modularity and lightness for industrial handling.

The DSC light crane systems are the ideal solution for creating monorails and suspended bridge cranes, single girder and double girder, with capacity from 125 to 1,000 kg with hand-push travel. Suitable for being suspended from the lower flange of the supporting beams, they act as the base of the modular handling system which is simple to install and fast to assemble.

Created with standard modules easy to fasten with bolts and without welding, they ensure simple installation, and are easy to make changes on and relocate.

The complete solution for your application.

The light crane systems are available in 3 types: small, large and reinforced profile based on the installation requirements based on the capacity and distance between suspensions. The electrical feed are realised with flat cable suspended on slides or trolleys running inside the channel profiles.

The systems are supplied with all parts required for installation: connection bolts, end stops, suspensions and manual trolleys for hoist and crane.

MAX

1.000 KG

Light handling system

CRANE SET

WHEEL UNITS AND GEARED MOTORS

The DGT series wheel units are built in 6 sizes to meet all of the main integration and market needs. The wheels can be supplied with the following diameters: 125 - 160 - 200 - 250 - 315 - 400 mm and are suitable to run on rectangular or square bar rails, crane rails and flat bottom rails.

The DGP series geared motors built in 4 sizes are designed to drive the wheel units, the connection between wheel and geared motor is by shaft and permits alternative applications.

MAX

66.000 KG

The offer most in line with the worldwide market's needs for handling masses up to 66,000 kg protecting the customer's convenience

CRANE SET

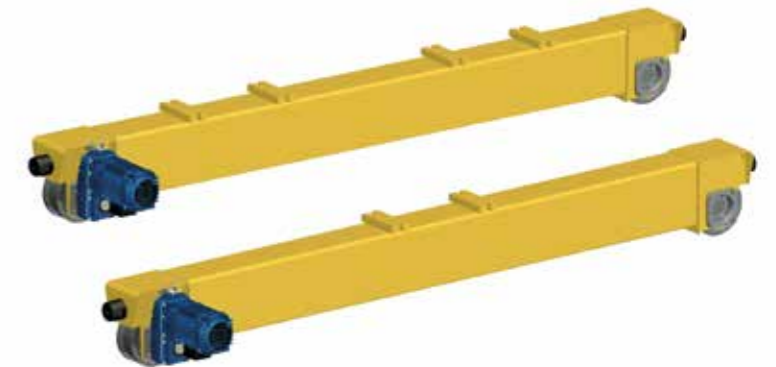

CRANE KITS.

Designed to permit movement on the bridge crane rails, the Donati end carriages are built in tubular profile and created based on the principles of modularity and versatility to easily adapt to a wide range of user needs. Equipped with DGT series wheel units combined with DGP series geared motors, they can move masses at a travel speed ranging from 3.2 to 80 m/min.

The end carriages in profile can be used with 3 different assembly types: lateral, top and lateral+on top.

The wheelbase for single girder bridge cranes ranges from 1.8 to 3.6 m, while the wheelbase for double girder bridge cranes ranges from 2.4 to 3.9 m, based on the crane span.

LEONARDO CONFIGURATION SYSTEM

Leonardo Configuration System is the Donati configurator system lets you configure and generate offers for Chain hoists, Jib cranes and Crane sets, easily and quickly; it lets you rapidly and efficiently respond to your customers' requests.

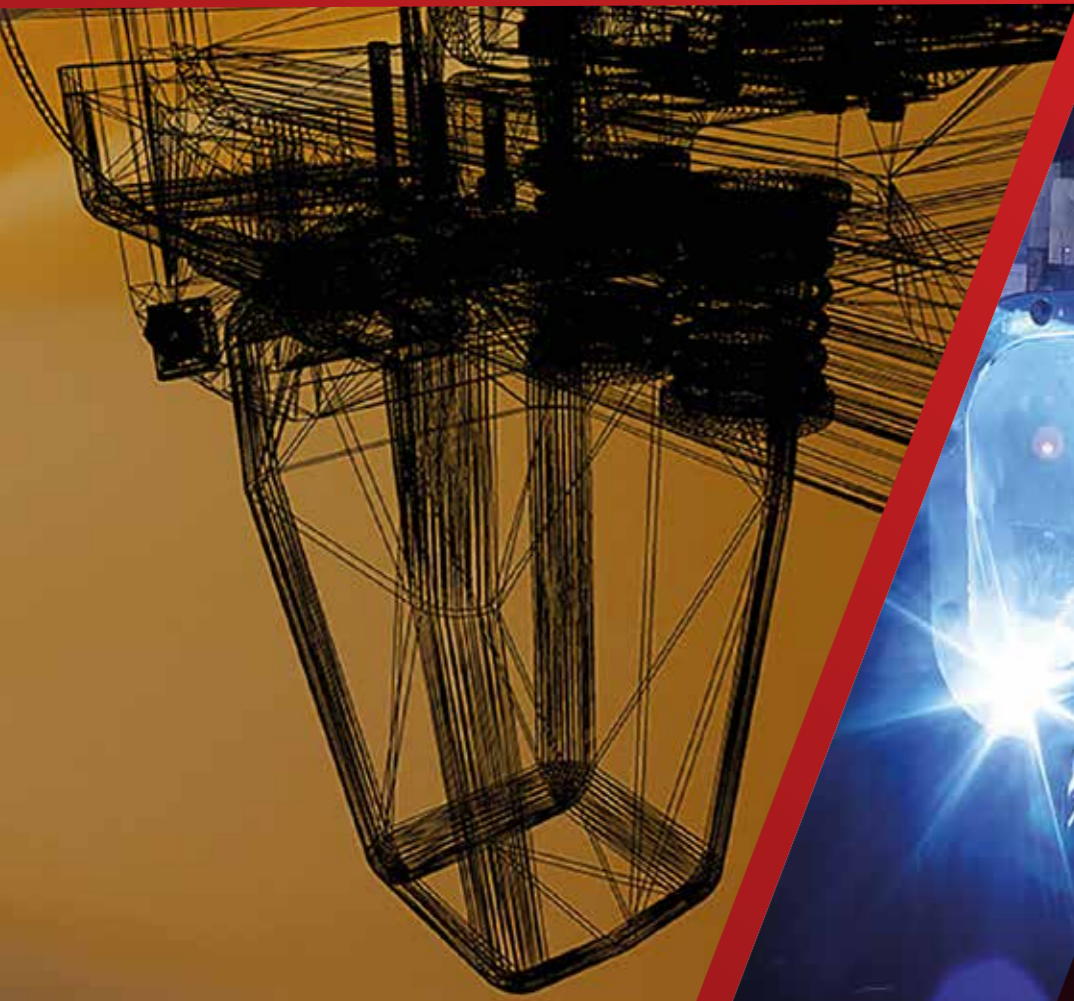

The suite is composed of two configurators:

Leonardo Product Configurator:

Used to configure chain hoists and jib cranes alone or in combination

Leonardo Crane Set Configurator:

Used to configure bridge cranes complete with all necessary accessories and Donati hoists.

DONATI WEBSITE

Donati's window on the world for customer service.

Manuals and product information

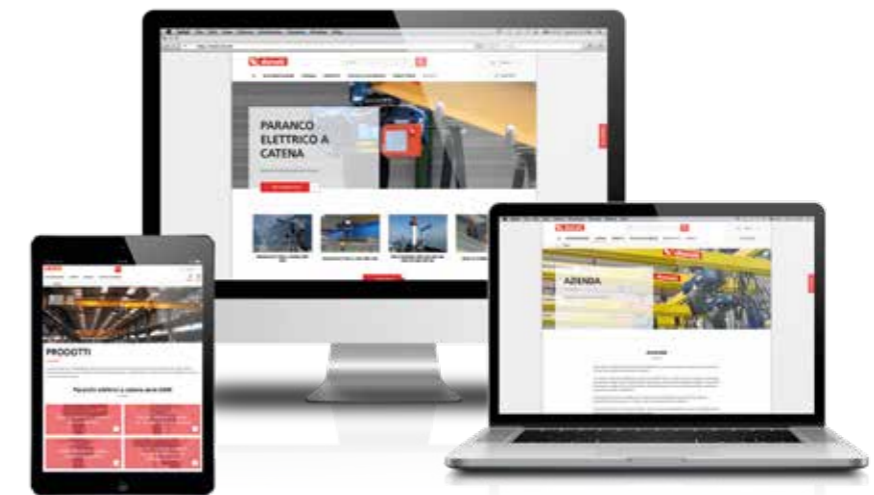

The new Donati website has been designed to assist customers so they can easily find all of the updated information on Donati products at any time. The Donati website makes it simple to consult and download product catalogues, technical manuals and product information sheets.

Donati Shop

The Donati Shop makes it possible to quickly and independently handle spare parts requests, thus reducing waiting times for customers.

Contact Section

The new contact section divided by departments lets you address your requests to the right team, so our staff can provide a faster and more accurate answer.

CERTIFICATIONS

Constant quality and reliability of products guaranteed by certifications that ensure maximum quality and since 1993 have regulated the organisation and control of materials, production processes and finished products at Donati. All of the detailed information is available on our website donaticranes.com.
