

CBE-MBE SERIES ELECTRICALLY ROTATED JIB CRANES

COLUMNS U-V-Z

COMPLETION OF THE USE INSTRUCTIONS OF THE MANUAL FOR THE

GBA/GBP SERIES JIB CRANES MAN 05MG04/5

INTRODUCTION

This technical documentation relating to the CBE-MBE series jib cranes contains updated instructions for installation, use and maintenance for the MAN 05MG04/5 manual, and is an integral part of that manual.

2.1.3 The composition of the jib cranes (Page 4 MAN05MG04/5)

This consists of a motoreducer fixed vertically on the lower part of the support bracket, made up of an epicyclical reducer heat treated, permanently lubricated gear wheels and a conical brake self-braking motor.

The drive sprocket of the motoreducer fits with the toothed crown integral with the arm which it powers. Progressive starting-up and braking are ensured by a frequency inverter powered with alternate monophase current with voltage at 230 V.

The limit switch to limit the rotation of the arm, is of the type with worm screws with 4 contacts. It is fixed to the rotation stop with 3 screws, inserting the drive shaft of the limit switch in the toothed crown of the arm, which powers the rotation. The drive shaft is connected to a structure with 4 cams, which by rotating activate 4 switches which work on the low voltage auxiliary circuit.

2.2.7 Characteristics and technical data (Pages 5-6)

3.5 Safety measures and instructions (Page 17 MAN05MG04/5)

3.5.2 safety and emergency devices

The electric powered jib cranes column type CBE series and wall type MBE series are supplied complete with the following safety and emergency devices:

1. The electric emergency limit switch on the rotation movement has to limit the rotation of the jib.
2. The travel limit switch has to limit the maximum travel of the trolley along the jib.
3. The mechanical actuators (when the jib cranes are supplied complete with electric trolleys), trolleys' limit switches stops
4. The anticollision device, available on request, avoids any crash between 2 or even more jibs operating in a same area, or prevents from any contact or interference with close existing structures.

4.3.5 Assembly of the arm (Page 28 MAN05MG04/5)

In the case of crane series CBE-MBE size V-Z integrate at the point 5

5.1 Insert into the central hole of the upper side pivots' flange (5), the greaser (10) and introduce the grease with the proper equipment.

Note: Check and grease every three months.

4.3.5.1 Assembly of the motoreducer (Page 28 MAN05MG04/5)

	For the assembly of the motoreducer proceed as follows:	
---	---	---

- Insert the motoreducer, with the sprocket already mounted, in the centring hole of the lower plate.
- Align the teeth of the sprocket to the spaces of the crown.
- Insert the 4 TCEI M10 screws in the holes of the flange by positioning the 2 longer screws above the plate, tightening them with their respective self-blocking nuts and then positioning the 2 shorter ones under the plate and screwing them directly to it.
- The clamping couple of the screws must be of 32 Nm.
- Once the electrical connections have been made, check the rotation direction of the arm in both directions and the operation of the limit switch.

4.3.6 Assembly of the electric system (Page 29 MAN05MG04/5)

	For the assembly of the electric system procede as follows:	
---	---	---

In the case of column crane series CBE

- 4) Connect the power cable (3) in the rotation control equipment (4) to the L1-L2-L3-N-EARTH clamps
- 5) Connect the rotation limit switch cable (5) to the clamps corresponding to the wiring diagram.
- 6) Connect the flat festoon (6), power supply to the hoist/trolley, to the clamps corresponding to the wiring diagram.
- 7) Connect the flat festoon cable (6) in the equipment on board the hoist to the clamps corresponding to the wiring diagram.
- 8) To assemble and connect the isolator as shown on page.59 of the MAN05MG01.

In the case of wall crane series MBE

- 4) Connect the power cable (1B) in the rotation control equipment (4) to the clamps L1 – L2 – L3 – N – EARTH.
- 5) Connect the rotation limit switch cable (5) to the clamps corresponding to the wiring diagram.
- 6) Connect the flat festoon cable (6), power supply to the hoist/trolley, to the clamps corresponding to the wiring diagram.
- 7) Connect the flat festoon cable (6) in the equipment on board hoist to the clamps corresponding to the wiring diagram.
- 8) To connect the power cable (1B) to the clamps in the rotation control equipment (4).

4.3.6 PUTTING INTO USE THE ROTATION LIMIT SWITCH

Operate as follows:

Function of the contacts:

SQ5A = RIGHT rotation service limit switch
 SQ6A = LEFT rotation service limit switch
 SQ5B = RIGHT rotation emergency limit switch
 SQ6B = LEFT rotation emergency limit switch

Adjusting the contacts:

- 1) Adjust the cam related to the SQ5B emergency contact immediately after the operation on the Adjust the cam related to the SQ5A contact to limit the rotation to the RIGHT, as required. SQ5A contact.
- 2) Adjust the cam related to the SQ6A contact to limit the rotation to the LEFT, as required. Adjust the cam related to the SQ6B emergency contact immediately after the operation on the SQ6A contact.

Note: the operation on the emergency limit switch contacts blocks the functioning of the whole machine. To activate an emergency operation, once the cause is identified, it is necessary to operate on the limit switch, releasing momentarily the cam of the contact in question. Get out of the anomalous position with the opposite control to that of the operation. Restore the original position of the contacts.
